
OPPORTUNITY REPORT • FOR TOKIO MARINE + ID&E

Risk-Management Solutions Across the Freight Journey

Worldwide competitive landscape across vendor procurement, dispatch, in-transit visibility, security, and cargo insurance — mapped against the gap a Tokio Marine + ID&E venture can credibly enter.

The structural authorization gap at the sub-carrier tier is the single largest unaddressed risk-management opportunity in worldwide freight.

PHYSICAL CARGO THEFT, USA 2025

\$725_M

+60% year-over-year. Per-incident average loss rose from \$187K (2023) to \$274K (2025), a 46% increase in two years (CargoNet, FBI IC3).

CARGO INSURTECH REINSURANCE CAPACITY

-50%

Munich Re and Swiss Re cut MGA exposure by more than half in 2024 after the \$4B Vesttoo fraud — tightening capacity precisely as cargo loss frequency accelerates.

Findings

- 1 RTTVPs (project44, FourKites, Shippeo, Wakeo) lose granular signal at the sub-carrier handoff.** project44 markets 245,000+ connected carriers, yet integration depth collapses once a 3PL subcontracts to non-integrated regional carriers — the layer where 53–69% of journeys actually move.
- 2 Telematics is ubiquitous; insurance pricing has not caught up.** 88% of fleets deploy telematics (SambaSafety 2025, n=402), but only 23% of insurer programs are underwriting-led. Premiums still price off declared values and pooled actuarial tables, not journey signals.
- 3 Incident response is reactive and uncoordinated.** No common workflow links shipper, 3PL, sub-carrier, insurer, and law enforcement; coordination begins manually by phone and email. Claims platforms shorten payout but rarely shorten time-to-response.
- 4 Worldwide solutions exist in every stage except the sub-carrier authorization layer.** 568 evidence points across 328 unique source domains map 60+ named vendors — none verify operator legitimacy, insurance, and safety record at the sub-carrier tier with insurer-grade data discipline.

The ask

A Wave-1 venture sprint with Tokio Marine + ID&E to validate the sub-carrier authorization product — eight weeks of interviews with marine cargo underwriters and Indonesia / Thailand 3PLs, against a \$2M deck-ready opportunity sizing.

Sources: CargoNet 2025 Annual Theft Report; FBI IC3 PSA-260430 (April 2026); SambaSafety 2025 Telematics Report; AM Best / Artemis on Vesttoo. Full source table at end of document.

The freight journey was sliced into six actor stages, scanned worldwide, and mapped against SEA deployment readiness.

Solutions were grouped by where they operate in the journey, not by product category. A vendor selling "TMS" with embedded carrier vetting was tagged Stage 2 if its risk-management value lay in dispatch, Stage 1 if it lay in onboarding. This lets the gap analysis be honest about which journey moments are crowded with vendors and which are under-served.

Stage 1 — Vendor Procurement

Who can be trusted to carry the cargo?

Carrier vetting marketplaces, KYB layers, identity / fraud detection, insurance verification. The earliest point of risk leverage.

Stage 2 — TMS & Dispatch

How does the load get tendered and accepted?

Enterprise / 3PL / carrier TMS, digital marketplaces, procurement software, control-tower-lite. Booking-layer fraud lives here.

Stage 3 — Fleet & Telematics

What's the carrier's operational signal?

Samsara, Motive, Geotab, Verizon Connect, Lytx, Netradyne. Rich data — locked inside the carrier's own SaaS contract.

Stage 4 — In-Transit Visibility

Where is the load right now, and is it OK?

project44, FourKites, Shippeo, Wakeo, Descartes MacroPoint, cargo IoT (Tive, Roambee, Controlant). Signal-loss at the sub-carrier handoff.

Stage 5 — Security & Escort

Who protects high-value or high-risk loads?

CargoNet, Overhaul GSOC, Solutions Group International, secure-parking networks, escort/convoy providers. Concentrated in NA/EU; thin in SEA.

Stage 6 — Cargo Insurance & Claims

Who absorbs the loss, and how fast?

Tokio Marine, Zurich, Chubb, AXA XL; Marsh, Aon; Loadsure, Breeze, Parsyl, Cover Genius. Pricing still anchored to declared values.

What the framework excludes — by design

Last-mile parcel delivery (different unit economics), warehouse-internal WMS, port-side maritime systems, pure spot-pricing marketplaces with no risk dimension, passenger telematics. Sources: see the full out-of-scope tag in the run input artifact.

Six-stage taxonomy validated against 60+ named vendors and cross-referenced against the run's source-validator pass.

Vendor procurement and counterparty risk is the earliest, highest-leverage moment — and per-incident loss is up 46% in two years.

PRIMARY USER

Shippers, 3PLs, freight brokers

BUSINESS MODELS

SaaS seat, per-carrier verification fee

SEA PRESENCE

Thin — most NA-centric, no SEA office

Representative vendors

Highway

Carrier vetting marketplace · USA · private

WHAT IT DOES

Identity-verifies carriers in real time at booking; blocks stolen-identity dispatches.

TRADE-OFF

NA-dispatch native; no SEA carrier coverage.

RMIS

Onboarding + monitoring · USA · acquired by DAT

WHAT IT DOES

Continuous insurance / authority / safety monitoring of carriers in a broker's roster.

TRADE-OFF

Pulls FMCSA / SAFER data — US-only by construction.

Carrier411 / MyCarrierPortal

Vetting feeds · USA · private

WHAT IT DOES

Aggregated freight-fraud watchlists, "FraudGuard" alerts, broker-shared blacklists.

TRADE-OFF

Watchlists are reactive; identity-spoofing outruns them.

The headline pain — quantified

Per-incident average loss climbed \$187,895 (2023) → \$202,364 (2024) → \$273,990 (2025), a 46% rise in two years. Aggregate US cargo theft losses jumped from \$454.9M (2024) to \$725M (2025), a 60% YoY increase. TIA-surveyed companies report average annual fraud losses above \$400,000; 22% lost over \$200,000 in a single six-month period (1, 2, 3, 4).

Sources: (1) CargoNet 2025 Annual Theft Report. (2) FBI IC3 PSA-260430 (April 2026). (3) TIA Watchdog 2025 fraud-prevention survey. (4) Overhaul cargo-theft brief, Q1 2024 (vendor upper-bound only).

TMS and digital freight marketplaces created speed at the booking layer — and a structural fraud surface that none of them designed away.

PRIMARY USER

Shippers, 3PLs, brokers, carriers

BUSINESS MODELS

Enterprise SaaS, per-shipment commission

SEA PRESENCE

Moderate — Kargo Tech, Waresix, Loadsmart SEA pilots

Representative vendors

E2open

Enterprise multi-enterprise TMS · USA · public (ETWO)

WHAT IT DOES

Shipper-side network TMS spanning planning, execution, visibility. Acquired project44's visibility stack.

TRADE-OFF

Enterprise-only; SEA presence via partner networks, not direct.

Convoy Platform (legacy assets via Flexport)

Digital freight marketplace · USA · wound down 2023

WHAT IT DOES

Bid-to-load automated dispatch with embedded carrier scoring. IP partially absorbed by Flexport / Outerlink.

TRADE-OFF

Liquidation case study — fraud and price discipline at marketplace scale stayed unsolved.

Kargo Technologies

SEA freight marketplace · Indonesia · private (Sequoia, Tiger)

WHAT IT DOES

B2B truck-freight marketplace and shipper TMS for Indonesia mid-market.

TRADE-OFF

Native to SEA blind spots but light on insurer-grade verification.

The headline pain

Brokers and shippers using automated TMS dispatch face accelerating fraud at the booking layer because platform automation — the commercial value proposition — is structurally in tension with the human-in-the-loop checks that catch fictitious-pickup schemes (Stage 2 PP-2.1; cross-validated against TIA and Overhaul 2024–2025).

Sources: E2open 10-K (FY2024). Flexport S-1 (2023). Kargo Technologies — funding announcements via PR Newswire and TechCrunch SEA. TIA Watchdog 2025. Indonesia Logistics Performance Index 2024 (World Bank).

Telematics generates the richest journey data in freight — and contracts it shut against the parties who underwrite the risk.

PRIMARY USER

Fleet operators, carriers (data not shipper-/insurer-shared)

BUSINESS MODELS

Hardware + SaaS subscription, multi-year contracts

SEA PRESENCE

Established — Samsara / Motive / Geotab via local resellers

Representative vendors

Samsara

Connected operations · USA · public (IOT)

WHAT IT DOES

Vehicle + driver + asset telematics on a single SaaS, sold to fleet operators. Real-time GPS, video, fuel, hours-of-service.

TRADE-OFF

Data is the carrier's contractual asset. Shipper / insurer access requires a separate commercial relationship.

Motive (KeepTruckin)

AI-first fleet platform · USA · pre-IPO

WHAT IT DOES

ELD-anchored telematics with AI-coached safety and embedded factoring / fuel cards.

TRADE-OFF

Strong NA share; thin published evidence on direct underwriter integrations.

Nirvana Insurance

Insurer-native telematics underwriter · USA · private

WHAT IT DOES

Underwrites commercial trucking using telematics-fed risk scores rather than declared values.

TRADE-OFF

Series D figures conflict (\$100M vs \$80M; \$1.5B vs \$830M valuation, Form D to confirm).

The headline pain

When a 3PL subcontracts a leg to a small or mid-size carrier running Samsara, Motive, or a regional telematics provider, the telematics signal generated during that leg is structurally owned and contractually gatekept by the carrier — not the shipper, not the 3PL, not the insurer (Stage 3 PP-3.1). The data exists; the parties who underwrite the risk cannot see it.

Sources: Samsara 10-K (FY2024). SambaSafety 2025 Telematics Report (n=402). ATRI 2025 Operational Costs of Trucking. Nirvana Insurance funding announcements (PR Newswire; pending Form D verification).

RTTVPs market connectivity at scale — and lose granular signal precisely at the sub-carrier handoff where the largest share of journeys actually moves.

PRIMARY USER

Enterprise shippers, large 3PLs, control towers

BUSINESS MODELS

Enterprise SaaS, per-shipment, hardware + subscription for IoT

SEA PRESENCE

Limited — Shippeo APAC pilots; Tive / Roambee via resellers

Representative vendors

project44 (now E2open)

RTTVP · USA · acquired by E2open (ETWO)

WHAT IT DOES

Markets 245,000+ connected carriers and 800+ ELD/telematics integrations across modes.

TRADE-OFF

Integration depth collapses at non-integrated sub-carriers. Revenue conflict (\$210M vs \$175M ARR; VERIFY required).

FourKites

RTTVP · USA · private

WHAT IT DOES

Real-time transportation visibility and predictive ETAs for enterprise shippers.

TRADE-OFF

Same sub-carrier signal-loss as project44; pricing opaque outside enterprise tier.

Tive / Roambee / Controlant

Cargo IoT · NL / US / IS · private

WHAT IT DOES

GPS + temperature + shock + light + tilt sensors with associated SaaS for high-value or cold-chain.

TRADE-OFF

Point-deployed by a single party (shipper OR insurer OR 3PL); data is siloed inside the buying party.

The headline pain — and the venture opening

project44 claims 245,000+ connected carriers with 800+ integrations; FourKites and Shippeo cite comparable networks. But within these networks, the data quality collapses once a 3PL subcontracts to a non-integrated regional carrier — the layer where 53–69% of journeys actually move (IUMI 2024 / WTO 2024 triangulation). The shipper and insurer get connectivity at scale and visibility-by-name only.

Sources: E2open 10-K (FY2024). Gartner MQ for Real-Time Transportation Visibility Platforms 2024. IUMI 2024 cargo premiums report (\$22.64B). WTO Merchandise Trade Statistics 2024. project44 vendor pages (cited under vendor-marketing flag).

Cargo security tooling is mature in North America and Europe, near-absent in SEA — and no platform stitches the five-party incident response together.

PRIMARY USER

High-value shippers, 3PLs, insurers (subrogation)

BUSINESS MODELS

SaaS + service retainer, escort fee per leg, intel-feed subscription

SEA PRESENCE

Sparse — formal cargo-security GRC ~zero; local escort services informal

Representative vendors

Verisk CargoNet

Theft intel + GRC · USA · subsidiary of VRSK

WHAT IT DOES

Cargo-theft database, alerts, and recovery coordination across NA carriers and insurers.

TRADE-OFF

USA-anchored; SEA data gaps acknowledged in own reporting.

Overhaul

GSOC + escort + intel · USA · private

WHAT IT DOES

Active monitoring, in-transit interventions, real-time theft response. Integrated with shipper TMS.

TRADE-OFF

Vendor-marketing-heavy on recovery metrics (96/73/20% claim; ATRI baseline ~26%).

Solutions Group International (SGI)

Security advisory + escort · USA · private

WHAT IT DOES

Security consulting, threat-intelligence, on-the-ground escort for high-value lanes.

TRADE-OFF

Bespoke service tier; no productized SaaS layer.

The headline pain

When a cargo theft or hijacking occurs, the shipper, 3PL, sub-carrier, insurer, and law enforcement do not share a common incident-response workflow. Coordination is manual — phone, email, messaging — across five parties. ReCAAP ISC 2025 confirms the pattern is acute in SE Asian shipping; Polri BUJP records 5,670 Indonesian security companies but no national cargo-incident workflow standard (Stage 5 PP-5.1).

Sources: Verisk CargoNet Annual Report 2025. ReCAAP ISC Annual Report 2025 (PDF via markdown). Polri BUJP registry 2024 (national security operator count). NTC&Logística Brazil Feb 2025 industry survey (14% revenue cited).

Cargo insurance is priced on declared values and pooled loss data — not on journey signals the rest of the stack already generates.

PRIMARY USER

Cargo insurers, brokers, shippers, 3PLs

BUSINESS MODELS

Premium ÷ declared value; commission on policy; SaaS for claims platforms

SEA PRESENCE

Established carriers — TM Indonesia, MSIG, Chubb; InsurTechs emerging

Representative vendors

Tokio Marine Holdings

Cargo carrier · Tokyo · public (8766.T)

WHAT IT DOES

Diversified non-life carrier; cargo line operates worldwide with SEA depth (TM Indonesia, Asia General).

TRADE-OFF

Pricing discipline traditional; product roadmap for telematics-anchored cargo pricing not publicly disclosed.

Loadsure

Cargo InsurTech · USA / UK · private

WHAT IT DOES

Per-shipment cargo cover sold through TMS / brokerage integrations. Programmatic claims handling.

TRADE-OFF

Vendor "70M shippers" claim has no primary anchor; capacity tightened post-Vesttoo.

Parsyl / Breeze / Cover Genius

Parametric / embedded cargo · USA / AU · private

WHAT IT DOES

Parametric perishables (Parsyl), broker-tech (Breeze), embedded distribution (Cover Genius).

TRADE-OFF

Each owns a slice; none owns the underwriting → claims → recovery loop end-to-end.

The headline pain — and the strategic opening for Tokio Marine

Premiums are priced on declared values and pooled historical loss data, not per-shipment journey signals — creating a cross-subsidy that penalizes well-managed operators. ATRI 2025 shows commercial-auto insurance cost at 10.2¢/mile (+3.0% YoY, +12.5% in 2023); CIAB quarterly P&C surveys confirm sector-wide 8–12% premium increases 2022–2024, undifferentiated by monitoring investment. The Vesttoo collapse (\$4B fraudulent LOC; Munich Re/Swiss Re >50% MGA cut in 2024) tightened capacity at exactly the wrong moment (Stage 6 PP-6.1, PP-6.4).

Sources: Tokio Marine 2024 Annual Report (8766.T). ATRI 2025 Operational Costs of Trucking (PDF via markitdown). CIAB quarterly P&C Market Surveys. AM Best, Artemis, Browne Jacobson on Vesttoo. IUMI 2024 cargo premiums (\$22.64B).

Wave 1 enters at the sub-carrier authorization gap — the only journey moment with both real money lost and no productized incumbent.

Each wave targets a journey moment where Tokio Marine + ID&E have an asymmetric right-to-win: regulatory standing in SEA, balance-sheet capacity, and an existing cargo-underwriting franchise. Sequencing is set by where competitive moat builds fastest — not where vendor activity is heaviest.

WAVE 1 · MONTHS 1–4	WAVE 2 · MONTHS 5–9	WAVE 3 · MONTHS 10–14
Sub-carrier authorization Productized vetting + insurance verification + safety scoring at the sub-carrier tier. Insurer-grade data discipline absent in Stage 1 incumbents. Pilot lanes in Indonesia, Thailand.	Telematics-fed underwriting Pricing model that ingests Wave 1 sub-carrier scores + Stage 3 telematics consents. Closes the 23% insurer-led underwriting gap. SambaSafety baseline (US) as upper bound; SEA pilot pricing in cooperation with TM Indonesia.	Incident-response control tower Stage 5 five-party workflow productized: shipper / 3PL / sub-carrier / insurer / law-enforcement workflow. Capitalizes on Wave 1+2 data foundation.

Why this sequence and not a Stage 4 RTTVP play

Stage 4 is saturated with \$1B+ funded vendors (project44, FourKites, Shippeo) and the recent E2open acquisition consolidates the category. Wave 1 enters at a journey moment where the largest incumbents (RMIS, Highway, Carrier411) have no insurer-grade product and no SEA presence — a defensible position TM + ID&E can build into quickly.

Source synthesis: per-stage pain-point gates and source-validator cross-stage pass; full evidence chain in run artifact 2026-05-14-0107.

From hypothesis confirmation to a deck-ready opportunity model in fourteen weeks.

Each phase has a decision gate: continue, narrow, or kill. The team commits to land or pivot inside one fortnight — Wright does not pad timelines to fit fund cycles.

Decision gates

Gate 1 (end of M2): three SEA 3PL interviews must confirm or kill the sub-carrier visibility hypothesis. Gate 2 (end of M4): one Tokio Marine underwriter co-signs the pricing thesis. Gate 3 (end of M5): pilot-lane unit economics show $\geq 30\%$ gross margin or the venture re-scopes.

Timeline assumes a four-person Wright build team plus one TM-side underwriter and one ID&E innovation lead seconded part-time. Cadence matches Wright's standard 14-week venture-build sprint.

Wright is asking Tokio Marine and ID&E to greenlight Wave 1 — an eight-week field-validation sprint against a defined budget and named owners.

- 1 Endorse the Wave-1 thesis (this week).** Confirm that the sub-carrier authorization gap, not a Stage 4 RTTVP play, is the right entry. Wright re-scopes inside two days if the answer is different.
- 2 Name a Tokio Marine underwriter and an ID&E innovation owner (within two weeks).** The Wave-1 sprint depends on weekly access to one named cargo underwriter (preferably TM Indonesia or Asia General) and one ID&E lead with mandate to commit. Both are co-authors, not reviewers.
- 3 Approve the Wave-1 budget (within four weeks).** Wright proposes a \$185–225K fixed-fee sprint covering interviews, sub-carrier scoring spec, pilot-lane unit economics, and a deck-ready opportunity model. Deliverables and gate criteria are listed on page 11.

What you get at the end of Wave 1

A field-validated venture thesis, a productized sub-carrier authorization spec, two pilot lanes with unit economics, and a deck-ready opportunity model — not slides. Wright delivers ventures, not slides.

Budget range reflects Wright's 2026 venture-build sprint cost band. Detailed scope-of-work circulated separately under NDA.
