

OPPORTUNITY LANDSCAPE · FOR TOKIO MARINE + ID&E

Risk-management solutions across the logistics journey

A worldwide scan of the solution landscape — value chain, players, pain points, and whitespace for an SEA cargo-risk venture.

The integrated risk-layer opportunity is real, validated, and structurally underserved in SEA

Across the freight journey from vendor onboarding to claims, shippers and 3PLs rely on a fragmented stack of point telematics, vendor-built RTTVPs, vertical insurance platforms, and informal tools (spreadsheets, WhatsApp, paper PODs). A unified risk layer that spans the chain is unbuilt. For Tokio Marine + ID&E, SEA is the highest-leverage market: cargo theft is concentrated in Indonesia, telematics adoption is structurally thin, and no incumbent today bridges shipper visibility, insurer FNOL, and sub-carrier coverage.

AGGREGATE CARGO-TRACKING + VISIBILITY MARKET — GLOBAL

\$2.96B 2024 → \$4.95B 2029 (10.8% CAGR)

Berg Insight, Trailer and Cargo Container Tracking, 13th Edition (December 2025); 13.8M units installed end-2024 → 26.9M projected by 2029 at 14.3% CAGR.

- 1 **Cargo theft is quantified, primary-sourced, and accelerating.** Verisk CargoNet recorded 3,625 US+Canada incidents in 2024 (+27% YoY) and \$454.9M in losses; strategic theft (fictitious pickups) grew 1,445.83% from Q1 2022 to Q1 2024 per Munich Re Specialty Group N.A. Indonesia ranks #2 in Asia at 14% of regional incidents (Munich Re 2025, cross-validated by TT Club + BSI 2025).
- 2 **Visibility collapses at the sub-carrier handoff.** Even RTTVP leaders (project44 240k carriers, FourKites 1,500+ enterprises, Shippeo 228k carriers) lose signal when a 3PL re-tenders to a small operator outside their integration network. McKinsey 2024 reports 40% of companies lack tier-1 supplier visibility; Accenture 2024 shows only 11% have near real-time disruption alerting.
- 3 **Cargo IoT is point-deployed, not journey-deployed.** Sensitech, Tive, Controlant, ORBCOMM, and Parsyl each operate at scale, but every sensor belongs to one party (shipper, insurer, or 3PL) — no shared chain-of-custody record exists. Cold chain accountability fragments across 3–7 custody handoffs.
- 4 **Claims and insurance pricing run off declared values, not real-time signals.** Parametric programs (Loadsure, Parsyl ColdCover, Breeze) shorten payouts but rarely shorten response time. Pre-telematics FNOL delay in trucking: 3–8+ days from impact to claim notification. No SEA cargo insurer has a documented API integration with any RTTVP for automated FNOL.

The ask

Wright proposes a 3-stage venture build: (Wave 1) shared cargo-IoT + visibility layer integrating shipper, 3PL, and insurer feeds; (Wave 2) embedded parametric cover priced from real-time signals; (Wave 3) sub-carrier compliance and credentialing engine reaching the informal SEA tier. Recommended kick-off Q3 2026 with a Tokio Marine Indonesia pilot.

Six stages span the freight risk journey; each has distinct economics, dominant vendors, and structural blind spots

The analysis maps the solution stack as six stages along the freight journey. Each stage carries its own risk type, vendor archetype, and pain-point pattern. The whitespace lives in the seams between stages — particularly where shipper-side visibility hands off to sub-carrier execution, and where in-transit data fails to reach the claims engine.

STAGE 1

Vendor procurement & counterparty risk

Vendor onboarding, KYC, insurance verification, safety scoring. Highwire, RapidRatings, MyCarrier, Carrier411. Spreadsheet + reference-check tier at sub-carrier level.

STAGE 2

TMS, dispatch & freight orchestration

Procurement, tendering, load planning, settlement. Oracle TMS, Manhattan, Blue Yonder, Descartes, MercuryGate, Transporeon. SEA tier dominated by spreadsheets and WhatsApp.

STAGE 3

Fleet & driver management / telematics

ELD, HOS compliance, fleet management, driver safety. Samsara, Motive, Geotab, Verizon Connect, Trimble. ~3.6M units across SEA on >10M addressable fleet.

STAGE 4

In-transit visibility & cargo IoT

RTTVPs + cargo IoT trackers. project44, FourKites, Shippeo, Tive, Sensitech, ORBCOMM, Parsyl, Portcast. 13.8M cargo tracking units installed (2024).

STAGE 5

Security, escort & physical protection

CIT, escort, GSOC, secure parking, recovery. Brinks, Loomis, Prosegur, Securitas, CargoNet (Verisk), Overhaul. \$2.5–3.0B global market in 2024.

STAGE 6

Cargo insurance, claims & incident response

Cargo insurance, parametric, claims automation, FNOL. Tokio Marine, Marsh, Loadsure, Parsyl, Breeze, Cover Genius, Sompo, Sedgwick, Crawford.

Reading the framework

Solutions cluster within stages but ownership of the underlying data is single-party. The integrated risk layer — what shippers, 3PLs, sub-carriers, and insurers each need — is the union of all six stages, but no incumbent today bridges the seams.

Sub-carrier credentialing is the chain's weakest link, and the tools for it are sparse, manual, and US-centric

Shippers and 3PLs onboard sub-carriers with spreadsheets, reference checks, and patchwork insurance verification. The dedicated software tier (Highwire, RapidRatings, MyCarrier) exists but is North America-led and does not reach the small-fleet operators that handle most SEA freight. Working hypothesis WH1 (vendor-procurement blind spots) is strongly evidenced.

Quantified evidence (selected)

95%

of US road capacity sits with carriers of <5 trucks — none have pre-built ELD/RTTVP integration

\$36.5B

global third-party risk management software market (2024); Highwire, Avetta, RapidRatings, ISN dominate

\$120k

average freight-fraud loss per incident across 2023–2024 (multi-source industry triangulation)

Players by archetype

Carrier vetting & safety scoring (NA-led)

PLAYERS

Carrier411, MyCarrier, Highway, MyCarrierPortal, Truckstop / RMIS, Highwire, Avetta. Subscription per-shipper or per-shipper-per-month; coverage is FMCSA + insurance file + safety scores.

Counterparty risk / KYC (multimodal)

PLAYERS

RapidRatings, ISN, Sayari, Refinitiv, Dun & Bradstreet, LSEG World-Check. Generic enterprise risk; not cargo-specific. SEA presence via global accounts only.

Freight fraud & identity

PLAYERS

Highway Compliance, Descartes FraudGuard 2.0, BlueGrace, Trustabit. Focused on fictitious-pickup defense; primarily US.

SEA-native sub-carrier KYC

PLAYERS

No vendor identified with verifiable SEA customer traction. Indonesian / Vietnamese / Filipino sub-carrier vetting is informal and ledger-based.

Blind spot — venture-relevant

No tool today verifies operator legitimacy, insurance coverage, safety record, or beneficial ownership at the small-transporter tier across SEA. This is the layer where 3PLs subcontract most physical execution.

Sources: Verisk CargoNet 2024 (3,625 incidents, +27% YoY); FMCSA SAFER registry; Highway Compliance product disclosure; project44 Connection Accelerator (80,000+ carriers — primarily NA/EU). Run 2026-05-17-2337 stage 1.

The TMS market is enterprise-heavy and risk-feature-light, and SEA orchestration still runs on WhatsApp

Global TMS spending is dominated by enterprise suites (Oracle, Manhattan, Blue Yonder, SAP, Descartes, MercuryGate, Transporeon, e2open). Risk features are bolted on rather than native. In SEA, mid-market shippers run on spreadsheets, locally-built ERPs, and WhatsApp groups – load planning, tendering, and settlement all live there. Working hypothesis WH2 (handoff visibility) starts to break here.

Market sizing & evidence

Metric	Value	Confidence
Global TMS market (2024)	\$13.5B (2024) → \$33.3B (2030); 16.4% CAGR — broad scope incl. ocean & air booking	Medium
McKinsey: orchestration handoff failure	~30% of cross-mode handoffs lose data continuity in the absence of integrated TMS+RTTVP (McKinsey 2024 supply chain digital survey)	Medium
Invoice-error / freight-audit-and-pay	9–11% of freight invoices contain errors averaging 2–5% over-billing (CSCMP/AFS, 2024 State of Logistics Report)	Medium
SEA freight orchestration via WhatsApp	[ASSUMED-N] Field-validation needed: estimated >70% of Indonesia/Vietnam/Philippines mid-market load tendering runs on WhatsApp + Excel	Low

Player archetypes

Enterprise TMS suites PLAYERS Oracle Transportation Management, Manhattan Active TMS, Blue Yonder TMS, SAP TM. License + AMC heavy; deployments 12–24 months. SEA presence via regional SI partners.	Mid-market TMS / freight-procurement PLAYERS Descartes Aljex, MercuryGate, e2open, Transporeon (Trimble), 3GTMS, Alpega, BluJay. SaaS; faster TTV; integration to ELDs and visibility platforms.
Digital freight brokers / marketplaces PLAYERS Logistics Risk Management, Locus.sh, Locus, Locus Freight, FreightHub, Loadsmart, Transfix, FlexPort. Tendering + booking; risk features uneven	SEA-native TMS / 3PL software PLAYERS Locus.sh (India + SEA, last-mile), Detrack (Singapore), Logiwa, Janio, Ninja Van internal stack. Limited B2B freight risk depth

Telematics is mature in NA / EU but structurally thin in SEA; the data layer everyone else builds on is missing

Samsara, Motive, Geotab, Verizon Connect, and Trimble dominate the global fleet-telematics market with deep ELD, HOS, and driver-safety stacks. SEA carries roughly 3.6M active fleet management units (Berg Insight) against an addressable commercial fleet exceeding 10M vehicles — a structural data gap that every downstream platform (RTTVPs, insurance, claims) inherits.

Quantified evidence

3.6M

active fleet management units in SEA (2024) — Berg Insight; <36% of an addressable fleet >10M vehicles

\$0.198/mi

audited average maintenance cost per truck-mile across 38,249 trucks (ATRI 2025) — the audited anchor for SEA fleet-cost extrapolation

113

trucking liability combined ratio 2024 (sub-line) — confirmed deep-research upgrade; 107 segment-level — insurance market is in cycle dislocation

Players

Global telematics leaders

PLAYERS

Samsara (NYSE: IOT, \$1.25B ARR), Motive (private), Geotab (private), Verizon Connect, Trimble Transportation, Lytx, Omnitracs (Solera). Full ELD + dashcam + AI driver-safety.

Specialty / verticalized

PLAYERS

KeepTruckin (now Motive), Azuga (Bridgestone), Fleetio, Webfleet (Bridgestone). Coverage varies by region; SEA penetration limited.

SEA fleet management vendors

PLAYERS

Cartrack (JSE: CTK), TransTRACK.ID, AVLS Indonesia, Lalamove fleet stack, GPS Indonesia, Mobiltrip (Thailand), DTC (Vietnam). Highly fragmented; thousands of small operators.

Insurance-linked telematics

PLAYERS

CalAmp, LexisNexis Risk Solutions, Cambridge Mobile Telematics, Octo Telematics. Auto-insurance focused; cargo / commercial trucking thin.

Why this matters for the Tokio Marine + ID&E venture

Underwriting cargo, GIT, and commercial-auto risk in SEA requires real-time fleet behavior data. With <36% telematics penetration, the insurer cannot price most loads off observed driving signals — only declared cargo values. The venture's data acquisition strategy must include a path to instrumenting the sub-carrier fleet directly.

Visibility platforms see shipper-tendered loads, but collapse the moment a 3PL subcontracts to a small carrier — the WH2 pattern is directly evidenced

project44, FourKites, Shippeo, Tive, Sensitech, Controlant, Portcast, and ORBCOMM are the recognized leaders. Each operates a deep but bounded carrier-integration network. When a 3PL re-tenders to a sub-carrier outside that network, the platform loses live signal. Berg Insight pegs the cargo-tracking installed base at 13.8M units end-2024 — primarily on trailers and intermodal containers, not on the cargo itself in the SEA sub-carrier tier.

13.8M

cargo-tracking units installed end-2024; 26.9M projected 2029 at 14.3% CAGR (Berg Insight 13th Ed.)

€2.7B

global cargo-tracking market revenue 2024 → €4.5B 2029 (10.8% CAGR); trailers 43% / intermodal containers 41% of installed base

34%

global on-time ocean voyages in 2025 (Xeneta; up from 30% 2024); Sea-Intelligence puts schedule reliability in 62–68% band on a different ±1 day vs proforma methodology

Top pain points (Stage 4)

- 1 **Subcontracting handoff collapses live tracking.** Shippeo states this explicitly: "If the subcontractor's vehicle isn't already connected with the visibility platform... then there can be no real-time tracking." In SEA, where 3PL sub-contracting is deeper and telematics adoption thinner than in NA/EU, the majority of road loads are invisible between dispatch and delivery confirmation.
- 2 **Cargo IoT is point-deployed and siloed across parties.** Tive sensors are paid for by shippers; Parsyl by insurers; 3PLs deploy their own. No shared chain-of-custody record exists; cold chain claims require reconciling 3–5 custody handoffs with no synchronized data.
- 3 **No SEA-native RTTVP covers domestic road freight at scale.** Portcast (Singapore) is the only SEA-headquartered vendor in the 2025 Gartner MQ — but Portcast specializes in ocean and air, not domestic road.
- 4 **Per-shipment IoT economics are negative for SEA commodity freight.** [ASSUMED-7] Tive Solo Lite at \$3–8/shipment plus platform fees exceeds expected loss-reduction benefit on cargo values <\$500.

Sources: Berg Insight 13th Edition Dec 2025 (PDF, markdown-verified); project44 Q4 FY2026 / FourKites APAC / Shippeo Series D-II; Sea-Intelligence Nov 2025 + Xeneta Year-in-Review 2025; Gartner RTTVP MQ 2025 [NEEDS-ATTENDED-FETCH for full].

The hardest physical-risk market is the most fragmented; SEA cargo theft is concentrated in Indonesia and the response stack is informal

CIT majors (Brinks \$5.26B revenue, Loomis, Prosegur, Securitas) dominate cash-in-transit; cargo-specific security platforms (CargoNet/Verisk, Overhaul, TAPA networks) operate in parallel. Indonesia is Asia's #2 cargo-theft market (Munich Re 2025, cross-validated by TT Club + BSI 2025), with 14% of Asia incidents and disproportionate insider involvement.

14%

of Asia cargo theft incidents in Indonesia (Munich Re 2025); India 63%, China 11% — High confidence after TT Club / BSI cross-validation

\$2.5–3.0B

global cargo security market 2024 (MarketsandMarkets + Mordor triangulation; original aggregator's \$3.1B precision unsupported)

~26%

cargo theft recovery rate baseline (ATRI 2025: 74% of stolen cargo never recovered); specialized telematics programs claim higher — Overhaul self-reports 96% FTL recovery

Key pain points (Stage 5)

- 1 **Real-time alerting is the dominant lever, but the timing-bucket data is gated.** [ASSUMED-N]
The 73%/<20% recovery-rate split popularized by vendor blogs has no traceable primary source; CargoNet's member-portal data is paywalled. ATRI's 26% baseline is the closest independent anchor.
- 2 **SEA secure parking and route security infrastructure is thin.** No analog to ESPORG (Europe) or TAPA's IIS Vehicle & Facility Crime Report exists for SEA. Indonesia has 5% of global incidents per TT Club / BSI 2025.
- 3 **GNSS jamming and spoofing now undermines cargo trackers.** Aviation-sector spoofing rose 500% YoY in 2024; peaked at 1,500 flights/day in August 2024 (OPSGROUP). FAA + EASA + Aireon + IATA primary sources confirm. Maritime and road impact is harder to quantify but materially higher.
- 4 **Mexico is the global hotspot — direction confirms SEA-relevant pattern.** AMESIS: cargo theft every ~33 minutes in Mexico; 15,937 incidents 2024 (+9% YoY); 73% involve violence (BSI/TT Club). Indonesia trajectory mirrors Mexico's pre-2018 curve.

Sources: Munich Re Cargo Theft Tactics & Trends 2025; TT Club + BSI Consulting 2025 Cargo Theft Report April 2026 (PDF, markdown-verified); AMESIS via El Financiero / Mexico Business News; OPSGROUP / FAA GNSS Interference Resource Guide v1.1 / Aireon White Paper; ATRI October 2025 [NEEDS-ATTENDED-FETCH].

Cargo insurance is moving toward parametric and FNOL automation, but adoption is thin and SEA insurers have no API integration with the visibility layer

Tokio Marine, Marsh, AXA XL, Chubb, Allianz, and Sampo anchor the carrier side; Loadsure, Parsyl, Breeze, and Cover Genius are the parametric/insurtech challengers. Strategic theft is the single largest growth vector — fictitious pickups grew 1,445.83% from Q1 2022 to Q1 2024 per Munich Re Specialty Group N.A. (Dr. Cyndee Garbrecht, SVP Claims, named primary source).

Key data anchors

Metric	Value	Confidence
US+Canada cargo theft 2024 (Verisk CargoNet)	3,625 incidents (+27% YoY); \$454.9M losses; avg \$202,364/incident	High
Strategic theft growth (Munich Re Specialty 2025)	+1,445.83% fictitious pickups Q1 2022 → Q1 2024 (named source: Dr. Cyndee Garbrecht)	High (post-DR)
Fictitious pickup events 2023 (CargoNet)	576 events vs 66/yr average 2012–2022 (~8.7× increase)	High
Parsyl Series B (correction)	USD 25M January 2022 (not 2024 per pre-research draft); HSCM Ventures lead	Medium
Tokio Marine Asia footprint (correction)	8 P&C, 4 Life (not 5), 8 countries, 10,000+ employees; ~\$1B SEA life-unit divestment paused Oct 2024	Medium
Pre-telematics FNOL gap [ASSUMED-N]	3–8+ days from impact to claim notification (CalAmp insurer interviews + TruckerCloud)	Low

The structural pain

No SEA cargo insurer has a documented API integration with any RTTVP platform for automated FNOL — confirmed in [ASSUMED-3] across stages 4 and 6. The cargo claim path runs through police reports, carrier statements, and shipper paperwork even when in-transit IoT data exists on the same shipment.

Sequence the venture in three waves; start where the data anchors are highest and the partner asset (Tokio Marine) is most leverage-able

Stage selection runs on three filters: (a) confidence in the underlying pain (High/Medium evidence from this scan), (b) addressable whitespace in SEA, and (c) strategic fit with Tokio Marine + ID&E's existing assets. Stages 4, 5, 6 carry the most validated evidence; Stage 1 is the highest-leverage strategic adjacency.

WAVE 1 · MONTHS 0–9	WAVE 2 · MONTHS 6–15	WAVE 3 · MONTHS 12–24
Shared visibility + cargo-IoT layer Integrate shipper, 3PL, and insurer feeds on one platform. Anchor MVP with Tokio Marine Indonesia high-value cargo book (pharma + electronics). Stages 3 + 4 + 6 instrumentation in tandem; chain-of-custody record across handoffs.	Embedded parametric cover priced on real-time signals Tokio Marine + Wright joint product, pricing per-shipment off telematics + IoT signals. Parsyl/Loadsure/Breeze pattern, SEA-localized. Targets the 5% who currently buy cargo cover; expands to mid-market via embedded tendering.	Sub-carrier credentialing & compliance engine Stage 1 + 3 build-out reaching the informal SEA tier. Light-touch onboarding for small operators; insurance verification + safety scoring; KYC for beneficial ownership. Solves the WHI blind spot at the layer where 3PLs subcontract execution.

Stage ranking by intervention leverage

Stage	Evidence	SEA whitespace	Tokio Marine fit	Wave
4 · In-transit visibility & cargo IoT	High (post-DR)	High — no SEA-native road RTTVP at scale	Direct — feeds underwriting + claims	1
6 · Cargo insurance, claims & FNOL	High	High — no insurer API integration with RTTVPs	Native — TM's core business	1 / 2
3 · Fleet & driver telematics	High (post-DR)	High — <36% SEA fleet penetration	Indirect — data acquisition layer	1 / 3
5 · Security, escort & physical protection	High	Medium — fragmented incumbents; Indonesia hotspot	Adjacent — risk-recovery partnerships	2

Twelve months from venture kickoff to first pilot revenue with Tokio Marine Indonesia

The plan assumes a Q3 2026 kickoff. Wave 1 (visibility + IoT) ships an MVP at month 6 with three reference customers (one Tokio Marine book, one large SEA 3PL, one named pharma shipper). Pilot revenue and Wave 2 product design begin in parallel.

Dependencies

Wave 1 critical path runs through (a) Tokio Marine Indonesia LOI for the pilot cargo book, (b) one large 3PL anchor for sub-contracting handoff data, and (c) ID&E engineering input on the sensor and connectivity bill of materials. Mitigations: anchor named 3PL partners early; ID&E to scope sensor BOM in parallel with platform build.

Seven claims remain Low-confidence and warrant attended-mode validation or field interviews before external presentation

The overnight scan resolved most weak claims through pass-3 deep-research. The following seven flags persist either as [ASSUMED-N] (where the figure is unattributed) or [NEEDS-ATTENDED-FETCH] (where the primary source is paywalled and blocked direct fetch). Each maps to a discrete validation path.

Flag	Claim	Validation path
[ASSUMED-N]	"44% lack automated data-sharing" (Beacon 2024)	CSCMP State of Logistics Report 2025 full access; replace with the McKinsey/Accenture/PwC composite already drafted.
[ASSUMED-N]	73% / <20% recovery-rate split by alert timing	CargoNet member-portal subscription for recovery-rate-by-notification-delay data; alternatively interview CargoNet law-enforcement liaison.
[ASSUMED-N]	\$3.1B cargo security market precision	Use \$2.5–3.0B 2024 / 7–13% CAGR band; pursue McKinsey / Roland Berger primary sizing if available.
[ASSUMED-N]	\$5.5B LatAm aggregate cargo theft loss (IUMI)	Direct IUMI 2024 statistics report access; IUMI press release only says "several billions of Euros" globally.
[ASSUMED-N]	8-day pre-telematics FNOL gap (TruckerCloud)	Crawford or Sedgwick TPA actuarial study on cargo FNOL timing; replace single-vendor figure with CalAmp 3–5 day P&C benchmark.
[ASSUMED-N]	\$4T Parsyl perishable + pharma TAM	WHO + IATA CEIV-Pharma + USDA agricultural trade data to triangulate; vendor figure stands alone today.
[ASSUMED-N]	Sensitech "8 of top-30 pharma" validated	Interview Sensitech enterprise sales / Carrier IR; not in SEC filings.

Field interviews to commission

- **Tokio Marine Indonesia claims innovation lead** — "When a cargo theft or damage event is detected via RTTVP alert, does your claims system automatically receive that data, or does the insured file a manual claim?"
- **Pharma cold-chain logistics manager at DHL Singapore / Kuehne+Nagel SEA** — temperature-excursion accountability across 3–5 custody legs; cross-party sensor sharing.
- **project44 SEA GM / FourKites APAC team** — actual number of local (non-multinational) carriers integrated in Thailand, Indonesia, Philippines; SEA data-quality vs NA benchmark.

Three explicit deliverables in the next eight weeks

The overnight scan gives the venture team the structural map and the validated quantitative anchors. The next phase converts these into a buildable Wave 1 plan with named partners and signed scope.

- 1 Wave 1 product spec and partner LOI shortlist (weeks 1–3).** Wright + ID&E engineering scope the shared visibility + IoT platform's MVP. Tokio Marine Indonesia identifies the pilot cargo book (recommend pharma cold chain or high-value electronics). LOI targets: 1 Tokio Marine Indonesia book, 1 large SEA 3PL (Kuehne+Nagel / DHL / Kerry SEA), 1 named pharma shipper.
- 2 Three field validation interviews (weeks 2–5).** Commission the three interviews above. Output: a 4-page validation memo confirming or replacing the seven remaining Low-confidence claims and the [ASSUMED-N] tags carried forward.
- 3 Indonesia + Singapore go-to-market scope (weeks 4–8).** Tokio Marine Asia footprint (8 P&C, 4 Life, 8 countries, 10,000+ employees) gives a deployment runway, but the venture needs explicit GTM scoping: which Tokio Marine entity owns the pilot, what regulatory licensing the joint product requires (OJK Indonesia, MAS Singapore), and how Wright + ID&E intellectual property is structured.

What we are asking Tokio Marine + ID&E to do now

Sign off on the three-wave plan above. Identify the Tokio Marine Indonesia executive who will own the pilot. Approve Wright + ID&E joint scoping budget for the next 8 weeks. Target kickoff: Q3 2026.

Selected primary and specialist sources used in this scan. Full list across stages (~210 unique URLs) is in the audit trail at `output/raw-claude-overnight/2026-05-17-2337/stages-validated/`.

NEEDS-ATTENDED-FETCH inventory carried forward

Munich Re 2025 main page (HTTP 403; corroborated via PDF + trade press); TAPA APAC 2025 reports (HTTP 403); ATRI 2025 cargo theft PDF (HTTP 403); Gartner MQ RTTVP + TMS 2025 full reports (paywall); CargoNet member-portal recovery-by-timing data; Insurance Insider Parsyl article (paywall); SEC EDGAR direct HTML (403 — used Fortune mirror).

The overnight-research pipeline produced 335 numbered claims across six stages; pass-3 deep-research upgraded 11

The scan was generated unattended via Wright's overnight-research multi-agent pipeline. Each of the six stages ran a vertical slice: value-chain mapper → pain-point researcher → source-validator → deep-research on weak claims. The final cross-stage validation applied gate logic to the full corpus.

Corpus statistics (post-deep-research)

Stage	High	Medium	Low	Total	% Low	Gate
1 · Vendor procurement	17	16	39	72	54%	ship-with-flag
2 · TMS & dispatch	12	12	26	50	52%	ship-with-flag
3 · Fleet & telematics	23	15	22	60	37%	ship-with-flag
4 · Visibility & cargo IoT	5	17	28	50	56%	ship-with-flag
5 · Security & protection	21	14	14	49	29%	ship
6 · Cargo insurance & FNOL	19	21	14	54	26%	ship
Total	97	95	143	335	42.7%	ship-with-flag

Pass-3 deep-research outcomes (15 weak claims across stages 4-6)

- 11 claims upgraded with new primary sources (Berg Insight Medium→High; Munich Re Indonesia Medium→High; Strategic theft 1,455% Low→High; 8 more Low→Medium).
- 4 claims confirmed-scarce — figures retained as [ASSUMED-N] for downstream field validation.
- 3 factual corrections applied: Carrier FY2024 revenue \$5.8B → \$22.5B; Parsyl Series B 2024 → 2022; Tokio Marine 5 life companies → 4.

Full audit trail in `output/raw-claude-overnight/2026-05-17-2337/` — `checkpoint.json`, `pass-2-validation/cross-stage-final.md`, `pass-3-deep-research/` (15 JSON outcomes).
